Low voltage distribution boards for Industrial and Commercial applications

Industrial

- Construction materials
- Small factories
- Waste recycling
- Water treatment
- Cement
- Food - Beverage
- OEM
- Components-parts productions
- Small assembly lines
- Printing

High commercial

- Telecommunications
- Data-call centers
- Airports
- Hospitals
- Banks
- Public transport
- Railways
- Subways
- Governemental buildings

Low commercial

- Large commercial offices
- Shopping malls
- Schools
- Stores
- Small offices
- Gasoline stations
- Restaurants
- Small shops

Applications

Modula Plus has been developed as an universal range of system enclosures for all kind of applications in low voltage distribution for the commercial and industrial environment.

Modula Plus is offered in kit-form to be assembled, equipped and wired by Panelbuilder and Installer.

The range consists of sheet steel floor standing enclosures, busbar systems and functional units prepared to mount LV devices offered by GE.

Modula Plus complies with standard IEC 60439-1 for Low Voltage application with rated current up to 4000A, offering protection degree from IP30 up to IP55.

Its aesthetically pleasing characteristics allow flexibility when selecting a suitable location.

Designed as an integrated system it combines both flexibility and ease of assembly with the reliability of a development dedicated for use in LV distribution.

Description

Modula Plus is a range of sheet steel system enclosures offered in kit-form, designed for low voltage distribution boards up to 4000A

Cabinets are offered in depth 500mm and 700mm, in width 650mm and 900mm. In addition, enclosures of 400mm width allow flexible layout of vertical risers and offering wide wiring space.

The doors are equipped with a four point closing mechanism, operated by a central handle. As standard, the closing mechanism is operated by a double-bit lock which can easily be replaced by a handle prepared to receive standard profile half cylinders. Plain doors offer an opening angle of 130°, transparent and design doors can be opened to an angle up to 180°.

For ease of incoming cables each cabinet includes an entry plate at the bottom, made of three parts.

All external panels, like rear- or sidepanels as well as the roofplate, may be removed to facilitate assembly and wiring.

Protection degree

With door IP55
Without door IP30 (equipped with functional units and coverplates)

Protection class

Earthing, protection class I

Material

Cabinet structure	Sheet steel, thickness 1mm
External panel	Sheet steel, thickness 2mm, powder coated
Doors	Sheet steel, thickness 2mm, powder coated

Colour	
External panel	RAL 7035
Coverplates	RAL 7024
Design doors	RAL 7035 / 7024

Mounting plates	Sendzimir zinc plated steel
Mounting profiles	Sendzimir zinc plated steel

Technical data

Nominal voltage	690V, 50/60 Hz
Nominal current	up to 4000A

Standards

Internal separation

Form 1, form 2
Form 3 (incoming section)

Standard application

Feeder

Air circuit breaker	400 up to 4000A	fixed withdrawable
Loadbreak switches	up to 2500A	fixed fused or fuseless
Moulded case circuit breakers	up to 1600A	fixed plug-in

Outgoing circuits

Moulded case circuit breakers	up to 1600A	fixed or plug-in
Loadbreak switches	up to 2500A	fixed, fused or fuseless

Miniature circuit breakers

Modula Plus

Safety

- Tested according IEC 60439-1
- Short-circuit proof
- Earth continuity proven

Ease of handling

- Lifting eye bolts are delivered as standard with each enclosure
- Transport segments can be coupled with stable lifting brackets for crane transport

Flexible layout

- Equipment zone
 - width 650mm
 - width 900mm
- Busbar zone
 - in the top
 - lateral
- Cabling zone
 - integrated cable compartment
 - enclosure of 400mm width

Cable entry

- Cable entry plate made of 3 parts included as standard in enclosures of width 650mm and 900mm
- Bases are offered in height of 100mm or 200mm

Reliable construction

- Welded top- and bottom frame
- Painted frame
- Doors and covers 2mm sheet steel, powder coated

Accessibility

- Door opening angle
 - 130° as standard
 - 180° with transparent and design doors
- Doors can easily be removed
- Removable side and rear panel
- Coverplates can be removed individually

Aesthetics

- Finish in light grey, RAL 7035
- Choice of doors
 - plain sheet steel
 - transparent, with wide area equipped with glass
 - design door

Safety

- IP20 separation shrouds offered to prevent from accidental access to the busbars

Ease of cabling

- Wide lateral cut-outs in mounting plates of functional units
- Integrated or separate cable compartment

Modularity

- Coverplates and functional units offered from height 50mm up to 700mm
- LV devices can be mounted in horizontal or vertical position

Integrated system

- Modula Plus is developed as an integrated system prepared to receive all kind of GE low voltage devices – in conformity to standards proven by typetesting.

General description

Modula Plus has been developed by GE as a universal range of system enclosures for all kind of applications in low voltage distribution in commercial and industrial environment.

Distribution panel type Modula Plus cover a wide range of internal protection – from IP30 up to IP55. Whereas IP30 is already achieved without doors by using the coverplates delivered with each functional unit. Higher protection is achieved with the doors: plain, transparent or design - IP55. When installed in visible area and for easy inspection of equipment mounted inside the enclosure, transparent doors or design doors offer an answer to today's request for products not only fulfilling technical characteristics but providing added value by nice aesthetics.

All kind of electrical devices can be mounted easily by using the appropriate functional units which are delivered in kit-form including all necessary fixation elements and coverplates already adapted with suitable cut-outs.

Modula Plus is developed as a system enclosure, offered as kits to be assembled, equipped and wired by panelboard builder and installer.

Designed as flat-pack, an enclosure consists of a number of kits which allows maximum flexibility to adapt each panel exactly to the needs of a specific application.

Each enclosure is based on a strong, welded frame on top and bottom, always being delivered with a plain roofplate, eye lifting bolts and a bottom plate in three parts for easy cable entry from the bottom.

Vertical uprights are bolted with a central screw to this frame, building the enclosure structure.

These vertical uprights are delivered with all fixation elements for rear panel, hinges and closing mechanism for the doors already mounted. This saves assembly time and prevents from making mistakes during the assembly.

A functional frame mounted to the front vertical uprights support mounting plates for LV devices and cover plates preventing operators from getting access to life parts inside of the enclosure.

Modula Plus enclosures are available with height of 2000mm offering a depth of 500mm or 700mm. To allow flexible layout of the panel, functional units can be mounted in enclosures of width 650 or 900mm. In addition, enclosures of width 900mm can be equipped with a kit for integrated busbar or cable compartment offering sufficient space for vertical busbars or outgoing cables. As alternative to an integrated busbar compartment, separate enclosures with width 400mm are offered to serve as busbar compartment.

Depending on type of application and ambient conditions the enclosures may be equipped with doors offering IP degree up to IP55, transparent doors equipped with a wide area of glass or a range of design doors combining functionality with a nice aesthetic.

Kit structure

Modula Plus is a range of floor standing system enclosures delivered in kit-form, to be assembled, equipped and wired by panel builder and Installer.

Each enclosure consists of different kits which can easily be selected from the overview below.

An enclosure consists of a welded frame on bottom and top. Vertical uprights are bolted with a central bolt on top and bottom, building the cabinet structure.

In order to be able to receive functional units, a functional frame has to be mounted to the front of enclosures of width 650 and 900mm. Thanks to this functional frame, cover plates and functional units of width 500mm may be fitted into enclosure width 650mm, whereas the enclosure of width 900mm may receive functional units and cover plates of 750mm width.

As alternative, the enclosures of 900mm width can be equipped with a functional frame including an integrated cable compartment. When this option is chosen, the enclosure of 900mm width as well needs to be equipped with functional units of width 500mm.

Rear panel, bases, side panel and doors can be fitted to the enclosure structure to ensure IP degree and good-looking finish.

Overview of the kit structure and a brief description of the content of each kit.

Top and bottom frame

Including roofplate, lifting eye bolts and bottom plate in 3 parts (enclosure width 650mm and 900mm). Includes gasket and parts for maintain IP with enclosures coupled.

Vertical uprights

Set of 4 pieces including fixation material, fixing elements for rear panel, hinges and closing mechanism for door already premounted.

Functional frame

Consisting of two vertical uprights, two horizontal parts in top and bottom and fixation elements.

Functional frame with integrated cable compartment

In addition to the content of a standard functional frame, two additional vertical uprights and a cover plate for the cable compartment are included.

External panel

Rear panel (1 piece)
Side panel (set of 2 pieces)
Delivery always includes all required fixation elements.

Doors

Hinges and closing mechanism already pre-mounted to the vertical uprights;
Transparent and design doors are delivered with hinges offering 180° opening angle.

Functional units

Kit of mounting accessories to support low voltage devices. Content: mounting plates or mounting frames, coverplates with cut-out according to the device, fixation material.

Functional units

Devices with high rated current are supported by stable mounting frames. Additional depth profiles need to be ordered according to the depth of enclosure.

Cover plates

Content: coverplate, fixation screws, distance holder, metric clips. Coverplates are offered from height 50mm up to 600mm allowing a flexible layout e.g. by providing space between functional units.

Cover plates for meters

Content: coverplate provided already with cut-outs for meters and change-over switch, fixation screws, distance holder, metric clips.

Bases

Each base consists of 4 corner parts and removable covers in front, rear and laterally. Bases are offered in height 100mm or 200mm.

Comfort handle

Handle prepared to receive standard profile half-cylindrical lock. The handle can easily be mounted, using same cut-out and fixation screws as the standard double-bit locking mechanism.

Lifting eye bolts

4 lifting eye bolts are delivered as standard with each cabinet. As alternative when intending to move equipped transport units, a set of reinforced lifting brackets can be chosen.

Side connection kit

Set of 4 corner profiles including all fixation screws. This kit is especially designed for coupling of equipped transport units.

Notes

A grid of orange dots for taking notes.

General accessories

Lifting brackets

884048 1

Set of lifting brackets for safe crane transport of equipped transport sections.
Kit of 2 lifting brackets and fixation material.

Coupling kit

884049 1

Kit for safe coupling of two enclosures building a transport section.
Set of 4 corner profiles including all fixation material.

Adapter for design and transparent door

884060 1

Adapter to mount comfort handle on design and transparent doors.

Paint RAL 7035

880669 1

For minor touch-ups on external panel.

Comfort handle

884059 1

Handle prepared to receive standard profile half cylindrical lock. Half cylinder profile not included.

This handle is mounted with the standard screws delivered with each door.

Locks - profile half cylinder type

843001 1

With 2 keys, V2432-E

843002 1

With 1 square key, 8mm

843003 1

With 1 triangular key, 8mm

Mounting profiles

Depth profile

Depth 500mm 884050 1

Depth 700mm 884051 1

fixed to the functional frame in front and the enclosure structure in the rear.

Depth 500mm 884052 1

Depth 700mm 884053 1

can be fixed to the enclosure structure in front and rear.

They are used to mount the vertical busbar in an integrated and separate cable compartment.

Set of two pieces including fixation material

Rear profile

Width 650mm 884055 1

Profile to fix busbar holder to the rear of an enclosure width 650mm or in an enclosure with integrated cable compartment.

Width 900mm 884056 1

Profile to fix busbar holder to the rear of an enclosure width 900mm.

Set of two pieces including fixation material.

This profile can be used for both busbar systems up to 630A and 2000A.

Bracket

884057 1

Bracket to mount staircase busbar in an integrated cable compartment.

884058 1

Bracket to mount staircase busbar in a separate cable compartment.

Set of two pieces including fixation material.

Bottom support for vertical busbars

884054 1

Consists of one L-shape support including fixation material.

This profile is used as well to support a horizontal busbar system in the integrated cable compartment.

Functional units for modular DIN-rail devices

Functional unit for modular devices include:

- DIN-rail for mounting the modular equipment
- fixation brackets to attach the DIN-rail to the functional frame
- coverplate with cut-out for DIN-devices
- screws to mount the DIN-rail and the fixation brackets
- screws to fix the cover plate

Dimensions	Ref. No.	Dimensions	Ref. No.	Pack.

Brackets for recessed mounting of DIN-rails

Brackets for recessed DIN-rail

Ref. No.	Pack.
883998	1

These brackets allow modification of a standard DIN-rail function to receive MCCBs type Record Plus FD-frame.
Set of 2 brackets.
(one set need to be ordered in addition for each function for MCCBs: 883778, 883779, 883780 or 883781)

Height adapter profiles

Profile to mount MCB next to MCCB on a recessed DIN-rail

Ref. No.	Pack.
883997	1
617947	1

Profile of length 1,2 m

Profile of length 354mm

Profiles allow mouting of MCCBs next to MCCB Record Plus FD-frame on a recessed DIN-rail.
(profile of length 354mm allows mounting of 18 or 19 modules next to a MCCB 4 or 3 pole in a functional unit of 24 modules)

Support for horizontal canalisation (only for use with functional units for modular devices of height 200mm)

Kit for mounting horizontal cable canalisation up to dimensions 60x40mm
The kit includes:

- horizontal profile supporting the canalisation profile
- lateral mounting brackets for fixation on the functional frame
- screws to fix the horizontal profile and the mounting brackets.

Note: Cable trunking is not included!

To assembly the mounting plates, 2 sets of depth profiles are necessary:
 • Depth 500mm with functional chassis: 2 x 884051
 • Depth 700mm with functional chassis: 2 x 884052
 Blind cover plate not included. Brackets included.

Functional units for MCCB Record Plus without RCD

All breakers with manual operation

Functional unit for MCCB type Record Plus include:

- Mounting plate for the breaker
- cover plate with cut-out
- screws to fix the mounting plate on the functional frame
- screws to fix the cover plate

Note: a covering profile to fill the cut-out in the cover plate is included in every functional unit for 3 breaker.

Functional unit to mount moulded case circuit breaker type Record Plus

Note: all functional units allow front or rear connection of the breaker.

Functional units for MCCB type Record Plus FK1600 include:

- Frame to mount the breaker
- cover plate with cut-out
- screws to fix the mounting frame on the functional frame
- screws to fix the cover plate

Depth profile to mount a functional unit type Record Plus FK1600 in horizontal position. Two set of depth profiles need to be ordered with every functional unit depending on the depth of the enclosure.

	Ref. No. of functional unit	Breaker type 3pole / 4pole	Mounting position	Qty of breaker	Height mm	Pack.

Assembly on copper bars type Cosmos - Vertical Mounting

Ref. No.	Height	Width	Cut out	Maximum number of Record Plus breakers
883999	300 mm	500 mm	433 x 66 mm	Type FD 3P = 5 4P = 3 Type FE 3P = 4 4P = 3

Functional units for disconnecter loadbreak switches DILOS

All switches with rotary handle

Functional unit for loadbreak switches type DILOS includes:
 - mounting plate for the breaker
 - cover plate with cut-out
 - screws to fix the mounting plate on the functional frame
 - screws to fix the cover plate

Functional unit to mount loadbreak switches in a system enclosure type Modula Plus.

Functional unit for loadbreak switches type DILOS 4, 6S, 7S and 8S include:
 - mounting frame for the breaker
 - cover plate with cut-outs
 - screws to assemble the mounting frame
 - screws for the cover plate

Note: depth profiles always have to be ordered separately according to the enclosure depth.

	Ref. No. of functional unit	Breaker type 3pole / 4pole	Mounting position	Qty of breaker	Height mm	Pack.
Width 500mm						
40 up to 125A	883851	DILOS 1	vertical	1	200	1

	883856 ⁽¹⁾	DILOS 4	vertical	1	600	1
800 up to 1250 A – 35kA	884061 ⁽¹⁾	DILOS 6S	horizontal	1	600	1
	884062 ⁽¹⁾	DILOS 6S	vertical	1	450	1
Width 750mm						
800 up to 1250 A – 50kA	884063 ⁽¹⁾	DILOS 6S	horizontal	1	700	1
	884064 ⁽¹⁾	DILOS 6S	vertical	1	600	1
1600 up to 2500 A – 50kA	884063 ⁽¹⁾	DILOS 7S/8S	horizontal	1	700	1
	884064 ⁽¹⁾	DILOS 7S/8S	vertical	1	600	1

(1) Loadbreak switches type DILOS 4, 6S, 7S, 8S are fixed on a mounting frame. For mounting the frame into an enclosure, always two sets of depth profiles need to be ordered according to the depth of the enclosure.
 e.g. For DILOS 4 horizontally mounted:
 Depth 500mm : 883855 + 2 x 884050
 Depth 700mm : 883855 + 2 x 884051

All functional units, except DILOS 7S/8S in horizontal position (884063), can be mounted in both depth 500mm and depth 700mm. 884063 requires an enclosure of 700mm depth.

Functional units for disconnecter loadbreak switches FULOS

All switches with rotary handle

Functional unit for fused loadbreak switches type FULOS include:
 - mounting frame for the breaker.
 - cover plate with cut-outs
 - screws to assemble the mounting frame
 - screws for the cover plate

Note: depth profiles always have to be ordered separately according to the enclosure depth.

Depth profile to mount a functional unit type FULOS 1 – FULOS 3S. Two sets of depth profiles need to be ordered with every functional unit depending on the depth of the enclosure.

	Ref. No. of functional unit	Breaker type 3pole/4pole	Mounting position	Qty of breaker	Height mm	Pack.
Width 500mm						
42 up to 160A	883857	FULOS 000/FULOS 00/FULOS 0	horizontal	1	250	1
250 up to 400A	883859 ⁽¹⁾	FULOS 1/FULOS 2	horizontal	1	400	1
	884061 ⁽¹⁾	FULOS 3S (DIN)	horizontal	1	600	1
630A	884062 ⁽¹⁾	FULOS 3S (DIN)	vertical	1	450	1

(1) Loadbreak switches type FULOS 2-3S are fixed on a mounting frame. For mounting the frame into an enclosure, always two sets of depth profiles need to be ordered according to the depth of the enclosure.
 e.g. For FULOS 2 horizontally mounted:
 Depth 500mm : 883859 + 2 x 884050
 Depth 700mm : 883859 + 2 x 884051

All functional units fit in enclosure depth 500mm and depth 700mm.

Functional units for automatic changeover switches Record

All breakers with motor operation

Functional unit for automatic changeover switches includes:

- mounting frame for the breaker.
- cover plate with cut-outs
- Screws to assemble the mounting frame
- screws for the cover plate

Note: depth profiles always have to be ordered separately according to the enclosure depth.

Functional unit for automatic controller for changeover switches type Record.

	Ref. No. of functional unit	Breaker type 3pole/4pole	Mounting position	Qty of breaker	Height mm	Pack.
	Width 500mm					
160A	883846 (1)	D160 / DH160 / J160 IDS	horizontal	2	450	1
250A	883846 (1)	D250 / DH250 / J250 IDS	horizontal	2	450	1
400A	883847 (1)	D400 / DH400 / J400 IDS	horizontal	2	550	1
630A	883848 (1)	D630 / DH630 / J630 IDS	horizontal	2	700	1
800A	883848 (1)	D800 / DH800 / J800 IDS	horizontal	2	700	1
1250A	883849 (1)	D1250 / DH1250 / J1250 IDS	horizontal	2	700	1
Automatic controller	883850	Automatic controller for changeover functional units	horizontal	2	250	1

(1) Changeover switches type Record are fixed on a mounting frame. For mounting the frame into an enclosure, always two sets of depth profiles need to be ordered according to the depth of the enclosure. e.g. For a changeover functional unit with breaker size 250A:
 Depth 500mm : 883846 + 2 x 884050
 Depth 700mm : 883846 + 2 x 884051

All functional units, except Record D1250 IDS (883849), can be mounted in both depth 500mm and depth 700mm. 883849 requires an enclosure of 700mm depth.

Cosmos functional unit for industrial fuses

Assembly on copper bars type Cosmos - Vertical Mounting

Ref. No.	Height	Width	Cut out
884078	300 mm	500 mm	421 x 195 mm

Functional units for air circuit breaker M-Pact Plus

Functional unit for ACB type M-Pact Plus includes:

- mounting frame for the breaker
- cover plate with cut-out
- screws to assemble the mounting frame
- screws to fix the cover plate

Note: a set of depth profiles always needs to be ordered separately according to the enclosure depth

Functional unit to mount ACB in a system enclosure type Modula Plus.

	Ref. No. of functional unit	Breaker type 3pole / 4pole	Mounting position	Qty of breaker	Height mm	Pack.
Width 500mm						
800A up to 2000A	884065 ⁽¹⁾	M-Pact Plus frame 1	vertical	fixed	700	1
	884066 ⁽¹⁾	M-Pact Plus, frame 1	vertical	withdrawable	700	1
Width 750mm						
800A up to 4000A	884067 ⁽¹⁾	M-Pact Plus, frame 1/2	vertical	fixed	700	1
	884068 ⁽¹⁾	M-Pact Plus, frame 1/2	vertical	withdrawable	700	1

(1) Air circuit breakers type M-Pact Plus are fixed on a mounting frame. For mounting the frame into an enclosure, always one set of depth profiles needs to be ordered according to the depth of the enclosure.

e.g. For M-Pact Plus frame size 1, fixed mounted:

Depth 500mm : 884065 + 1 x 884050

Depth 700mm : 884065 + 1 x 884051

Note: All functional units, except M-Pact Plus frame size 1, fixed (884065), can be mounted in depth 700mm only. 884065 can also be fitted in an enclosure of 500mm depth.

Form separation

Enclosures type Modula Plus can be equipped with separation screens Form2 according to standard IEC EN 60439-, which means separation between busbar compartment and functional units with a protection degree of IP2x or IPxxB. Columns with feeder ACB type M-Pact Plus can be equipped with separation screens up to Form 3. The individual separation screens are made of polypropylene (self-extinguishing) with a thickness of 3mm.

Horizontal separation screens Form 2 - Separation between horizontal busbar and functional units

Horizontal separation screens include:
 - Separation screen
 - Fixation screws
 Note: horizontal separation screens are fixed to depth profiles of the horizontal busbar in the top. If there is no busbar system, a set of depth profiles needs to be ordered separately according to the enclosure depth

Ref. No. of form separation	Enclosure dimensions	Pack.
884044	Enclosure width 650mm and 900mm (depth 500mm and 700mm)	1
884045	Enclosure width 400mm (depth 500mm and 700mm)	1

Vertical separation screens Form 2 - Separation between lateral busbar and functional units

Vertical separation screens include:
 - Separation screen
 - Fixation screws
 Note: vertical separation screens are fixed directly to the vertical uprights of an enclosure.

884042	Panel depth 500mm	1
884043	Panel depth 700mm	1

Vertical separation screens Form 2 - Separation screen for vertical busbar systems in the rear

Busbars

The busbar system for enclosures range Modula Plus is designed to allow easy installation and combination of horizontal and vertical busbars, whereas the vertical busbar can be located in the back of the enclosure, behind the functional unit or in a lateral busbar compartment.

Nominal current (IP30)

- Horizontal and vertical busbar in a lateral cable compartment:
 - 2140 A in an enclosure of 500mm depth (max. 2 bars per phase)
 - 4000A in an enclosure of 700mm depth (up to 3 bars per phase)
- Vertical busbar in the back of a functional compartment:
 - up to 630A
 - up to 2000A

In addition, there is an option to place a vertical staircase busbar system up to 630A in the lateral cable compartment. The copper bars of this kind of busbar system are arranged in different layers, allowing easy cabling of outgoing devices.

Main busbar system

The main busbar system is based on rectangular copper bars of 5mm thickness and a length of 1650mm. Each bar has lengthwise diam. 11mm holes every 25mm on both sides for easy and time saving connections and to fix outgoing cables.

The copper bars are bent on one side for lengthwise or square coupling without any additional connecting plate.

The vertical busbar can be mounted in an integrated lateral busbar compartment at left or right side of an enclosure of 900mm width or in a separate cable and busbar compartment.

It is recommended to mount the bottom support of the vertical busbar after defining the exact position of the busbars.

The horizontal busbar system can be mounted at any height of the enclosure Modula Plus and requires a height of 250mm (with copper bars up to 125x5mm) or 300mm (copper bars 160x5mm). The busbars can be front covered by plain cover plates of appropriate height and width.

In enclosures of depth 700mm the space in front of the busbars may as well be used for functional units for terminals or DIN-rail devices.

The supports for the horizontal busbars are the same as for the vertical busbar system.

The busbar supports are fixed to the enclosure by depth profiles, which always need to be ordered separately.

Horizontal busbar

Depth profiles to mount vertical and horizontal busbar

Horizontal busbar in enclosure

The horizontal busbar system is fixed to the functional frame in front and the enclosure structure in the rear with standard depth profiles.

884050	1
--------	---

Enclosure depth 500mm, set of 2 profiles

884051	1
--------	---

Enclosure depth 700mm, set of 2 profiles

Vertical busbar in integrated or separate cable compartment

The vertical busbar is fixed to the enclosure structure in front and rear by means of following depth profiles.

884052	1
--------	---

Enclosure depth 500mm, set of 2 profiles

884053	1
--------	---

Enclosure depth 700mm, set of 2 profiles

Bottom support for vertical busbar

884054	1
--------	---

Enclosure depth 500mm and 700mm
The vertical busbar is supported at the bottom by a busbar holder fixed on the depth profiles for the vertical busbar by an additional L-shape profile 884054. This profile may serve as well to support a horizontal busbar in a cable compartment, where no functional frame is available.

Rear mounted busbar system up to 2000A

Enclosures Modula Plus offer an option to use rear mounted busbar system or nominal current up to 2000A.

Technical characteristics	
Admissible current	2000A in IP30
Cross section of busbars	63 x 5mm 80 x 5mm
Length of busbars	800mm

The busbar system up to 2000A in the rear is based on rectangular copper bars of 5mm thickness and a standard length of 800mm. The bars are fixed to a 4pole busbar holder which is mounted by a means of mounting profile in the rear of the cabinet.

The number of copper bars per phase differs between 1 up to 3 depending on the nominal current requested. In every case the front bar is bent lengthwise under an angle of 120° and features a row of perforations with diam. 11mm and a center distance of 25mm on the bent side of the bar. These holes facilitates easy connections to outgoing devices.

Due to a flat end on one side of the bars, the busbar system can easily be coupled to a total length of 1600mm. The rear mounted busbar system can be placed at any height inside the enclosure.

Rear mounted busbar system up to 630A

Enclosures Modula Plus offer an option to use rear mounted busbar system or nominal current up to 630A.

Technical characteristics	
Admissible current	630A in IP30
Cross section of busbars	20 x 5mm
	32 x 5mm
	30 x 10mm
Length of busbars	1000mm

The copper bars have pre-tapped holes M6 or M8 (depending on the cross section of the copper bars) for easy cable connection. The busbar holder guarantees high short-circuit resistance and is fixed to the rear structure of the cabinets by a special mounting profile. A protective shroud of height 1000mm offers the possibility to cover the whole busbar system, offering internal separation of form 2.

Example of busbar system 630A, to be mounted in enclosure width 650mm:

- 1 x 880851, 4 copper bars 30 x 10mm
- 3 x 880846, busbar holder
- 2 x 884055, mounting profiles W650mm

Lateral busbar system up to 630A

Enclosures Modula Plus can be equipped with busbar system up to 630A located in the lateral cable or busbar compartment at left or right side of the cabinet.

Technical characteristics	
Admissible current	630A in IP30
Cross section of busbars	20 x 5mm
	32 x 5mm
	30 x 10mm
Length of busbars	1000mm

The copper bars have pre-tapped holes M6 or M8 (depending on the cross section of the copper bars) for easy cable connection.

The busbar holder for lateral busbar systems has a staircase shape which eases the cabling of the different phases. Like in the rear mounted busbar systems, the staircase busbar system can be equipped with a protective shroud to prevent from accidental access to life parts, offering internal segregation of form 2.

Mounting in Modula Plus:

For mounting a busbar system of 630A in the lateral cable compartment some fixation brackets are required to fix the busbar holder in the rear of the cable compartment.

Earthing busbars

In enclosures Modula Plus horizontal and vertical earthing bars can be realised with copper bars of cross section 32x5mm. The bars have a standard length of 1750mm and are provided with pre-drilled holes on its whole length. The earth bars are fixed to the functional frame by brackets included in the delivery of the bars. The vertical bar is bent with an angle of 90° at one side, offering an simple possibility to connect to the horizontal busbar.

Containing one copper bar, L 1750mm,	
4 cage nuts and screws for fixing to the functional frame	

Possible configuration of busbar systems

The drawing on the right gives an overview of all different kind of busbar configurations which may be implemented in system enclosures Modula Plus:

- rear busbars up to 630A
- rear busbars up to 2000A
- lateral staircase busbars up to 630A
- vertical busbars up to 4000A
- horizontal busbars up to 4000A

System enclosure for Low Voltage distribution panel from 160 up to 4000A

Conformity to standards

The panels are complying to the standard EN 60439-1. All type tests and individual tests required by the standard have been done. Internal separation Form 1, Form 2 as option.

Technical characteristics

The panel is designed of kit-form enclosures made from sheet steel, which can be stand alone and coupled next to each other. Each cabinet consists of a strong, welded top and bottom frame to which the vertical uprights are bolted. Top and bottom frame and vertical uprights offer a pattern of rectangular and round holes for easy fixation of functional units, depth profiles and busbars.

They consist of three different compartments, all of them fully accessible from the front.

The busbar compartment

The main busbar is located in the top of the enclosure and is based on flat, rectangular copper provided with holes diameter 11mm for easy coupling and connection of wires and busbars in step of 25mm. Cross section from 63x5mm up to 160x5mm. Center distance 90mm. The bars are provided with a bending at one end to allow easy connection with each other.

The compartment for functional units

The panels are equipped with individual functional units, consisting of mounting plates or mounting frames supporting one or more low voltage devices and covered with metal coverplates to prevent from accidental access to live parts.

- functional units for DIN-rail equipments
- functional units for meters
- functional units for Moulded Case Circuit Breaker from 125 up to 1250A. The devices are mounted fixed in horizontal or vertical position
- functional units for Loadbreak Switches up to 3150A. The devices are mounted fixed in horizontal or vertical position
- functional units for Air Circuit Breakers up to 4000A.

The devices are mounted fixed or withdrawable. The design of functional units allow quick and easy replacement or modification of the units.

The cable compartment

An integrated cable compartment located at the left or right side of the enclosure guides outgoing cables or contains vertical busbar based on flat, rectangular copper provided with holes diameter 11mm for easy coupling and connection of wires and busbars in step of 25mm. Cross section from 63x5mm up to 160x5mm. Center distance 90mm. The bars are provided with a bending at one end to allow easy connection with each other.

For rated current up to 630A a staircase type of busbar based on flat copper from 20x5mm up to 30x10mm is used for easy interconnection between the busbar and outgoing Low Voltage devices.

The bars are provided with threaded holes M6 or M8 and can be covered by a protective shroud IP20 as option.

Electrical characteristics

Rated operational voltage	690V
Rated insulation voltage	1000V
Rated short-circuit withstand current	70kA / (1s)
Rated current of the busbar system	up to 4000A
Degree of protection	IP55
	IP30

The panel is designed for indoor use

Ambient temperature	35°
Name of the product	Modula Plus

Heat dissipation values

Principle

According to EN 50298 and IEC 60890

For common electrical applications, a temperature rise of 50K is generally accepted. If the rise is above 50K, a larger enclosure or means of ventilation should be chosen. More volume or decrease of IP degree results in a decrease of the temperature rise. The absolute temperature in °C inside the enclosure is the sum of the ambient temperature in °C and the temperature rise in K. According to the standards, the absolute temperature is max. 80 °C. Depending on the enclosure dimension the temperature rise caused by power losses of electrical components installed inside varies.

How to use the Matrix

First chose the right matrix according to the position and size of enclosure.
Second calculate the effective power loss in Watt (left column) of all electrical components and busbars installed. Add 10-20% to the total effective power loss in order to compensate small wirings and connectors.
Third read in the matrix the temperature rise expected due to the thermal power dissipation.

Data

The following tables give an overview of heat dissipation values of the several enclosures types. Modula Plus depending on the way they are installed. Temperature rise always is given for the top and a location in the middle of the enclosure.

Stand alone - IP55

The policy of GE Consumer & Industrial is one of continuous improvement. The right is reserved to alter the design or any structural details of the products at any time without giving notice.

February 2007
GE Consumer & Industrial

GE Consumer & Industrial Power Protection

The Power Protection division (formerly GE Power Controls) of GE Consumer & Industrial is a first class European supplier of low-voltage products including wiring devices, residential and industrial electrical distribution components, automation products, enclosures and switchboards. Demand for the company's products comes from wholesalers, installers, panel-board builders, contractors, OEMs and utilities worldwide.
